About The Job

YellowIpe is recruiting Backend Developer for direct integration into a multinational company.

What You'll do...

As a Backend Engineer, you are part of an agile Software Development Team, responsible for the full lifecycle of an application using cutting-edge technologies to deliver amazing value to our customers, while scaling our platform to meet the demands of worldwide markets.

We hope you have...

- At least 3 years of proven track record of working with Java (preferable, 8+).
- Experience working with a high concurrency/high transactional/ highly available platform;
- Knowledge of Scala, Akka, Memcached, Apache Storm, Apache Cassandra, ZooKeeper or RabbitMQ.
- Experience of using established design patterns;
- Familiarity working with Client-server protocols such as SOAP, REST;
- Experience working with Kafka and message queueing systems;
- Awareness and experience in using agile methodologies;

Location Requirements:

- Living in Portugal (preferably Porto)
- Living in Portugal/Porto or nearby cities.
